[????????](#)

??

The AIVIS is non-contact temperature monitoring solution. The AIVIS Solution can easily be installed and implemented to detect elevated skin temperature in environments such as airports, hospitals, shopping malls and business houses. This solution should not be solely or primarily used to diagnose or exclude a diagnosis of COVID-19 or any other disease. Elevated skin temperature in the context of use should be confirmed with secondary evaluation methods (e.g., an NCT or clinical grade contact thermometer). The Solution should be used to measure only one subject's temperature at a time. Visible thermal patterns are only intended for locating the points from which to extract the thermal measurement.
