Jietong Digital JTD5500 series products are a small-sized 5G Gigabit Ethernet interface smart gateway with super edge computing capabilities. It is equipped with high-performance 5G communication modules and integrates data management, smart collection, and multiple protocol conversions. , 5G/4G wireless communication, data processing and forwarding, VPN virtual private network, WI-FI coverage, GPS positioning and other functions integrated into one.

The product is based on Linux system, integrates Python development environment and C language development environment, supports MQTT, and is designed to fully meet industrial standards. Based on the advantages of 5G's high speed, low latency, and large bandwidth, it is widely used in IoT projects such as smart cities, smart transportation, smart municipal administration, smart power, smart parks, smart scenic spots, smart light poles, etc.
