UWB 40W/50W/80W/100W Inline Attenuators

Tone Spread's 80 Watt Inline Attenuators are designed to attenuate the power that is supplied by a source or input, that is up to 80 watts, down to a desired level as the power input for the next element in the network. These are fixed, in-line attenuators.

Tone Spread's passive attenuator reduces the amount of power being delivered to the connected load by a single fixed amount.
